## Styling Syntax and Theory

LATEST SUBMISSION GRADE

92.3%

1. Which of the following is not an option for specifying a color in CSS3?

1 / 1 point

- ☐ Use a hexadecimal value
- ☐ Use the color name
- ☐ Use an rgb value
- ☒ All of these options are valid.

✓ **Correct**

Yes, they are all options!

2. If your body tag uses the style attribute **style="text-align:center"**, you can overwrite that property by using the CSS3 rule.

1 / 1 point

```
1 body{  
2   text-align: left;  
3 }
```

- ☐ True
- ☒ False

✓ **Correct**

The style attribute has a higher precedence so the browser will align the text to the left, not the center.

3. What is wrong with the following rule?

1 / 1 point

```
1 body{  
2   color: #000000;  
3   background-color:#FFFFFF;  
4   font-family: Times, Arial, Cursive;  
5 }
```

- ☒ This is a valid rule
- ☐ You can't specify three styles in a single rule
- ☐ You can't specify three options for font-family.

✓ **Correct**

4. Assume the following rule is the only one that styles the body element:

1 / 1 point

```
1 body{  
2   font-family: Cursive, Helvetica, Verdana;  
3 }
```

What happens if the browser doesn't support any of these font families?

- ☐ The text will be displayed in Cursive
- ☒ The text will be displayed in the default browser font-family
- ☐ The text will not be displayed

✓ **Correct**

5. The browser defaults override rules specified in an external style sheets.

1 / 1 point

- ☐ True
- ☒ False

✓ **Correct**

✓ Correct

6. Using the code below, will the body of the page have the background-color defined in the file style.css or the background color define in the <style> tag?

1 / 1 point

```
1 <head>
2 <meta charset = "UTF-8">
3 <title>Test code</title>
4 <link rel "stylesheet" href = "style.css">
5 <style>
6   body{
7     background-color: #44CCDD;
8   }
9 </style>
10 </head>
```

- ☒ <style>
- ☐ style.css

✓ Correct

7. Internal styling (rules specified in the <head> section) override rules specified with the style attribute in a tag.

1 / 1 point

- ☐ True
- ☒ False

✓ Correct

8. The default display value for <a> element is:

1 / 1 point

- ☐ inline-block
- ☐ block
- ☒ inline
- ☐ none

✓ Correct

9. The default display value for <span> is:

1 / 1 point

- ☐ block
- ☐ none
- ☐ inline-block
- ☒ inline

✓ Correct

10. A block element takes up the full width of it's parent, even if the content is smaller than the parent. So two block elements at the same will not be side-by-side.

1 / 1 point

- ☒ True
- ☐ False

✓ Correct

11. Inline elements take up the full width of the browser, even if the content is smaller than the browser size.

1 / 1 point

- ☐ True
- ☒ False

✓ Correct

12. Which CSS3 property is used to center text? (Only provide the property name; do not give it a value.)

0 / 1 point

- ☐ text-center
- ☐ text-align
- ☒ align
- ☐ center

 **Incorrect**

13. Which of the following is the best way to convey that your text has special meaning?

1 / 1 point

- ☐ Using colors to signify the important text
- ☒ Using semantic tags in addition to color and/or font.
- ☐ Using a larger font size to signify the important text
- ☐ Using a combination of font size and color to signify the important text

 **Correct**

Yes! The semantic tags convey meaning that goes beyond appearance
